

Consolidated European Waste Catalogue

This aim of this document is to provide guidance on the use of the European Waste Catalogue (EWC 2002). It reproduces the EWC 2002 in full, including amendments, and includes instructions for its use.

The structure of the EWC 2002

The EWC contains 20 chapters that are based upon the source that generated the waste or upon the type of waste. The chapter headings are shown in Table A1.

Each chapter is identified by a two-digit number :

e.g., 07 Wastes from Organic Chemical Processes

Each of these chapters contains sub-chapters that are identified by four digits. ;

e.g., 07 01 Wastes from the manufacture, formulation, supply and use (MFSU) of basic organic chemicals.

The unique six-digit code for each waste is contained within the sub-chapters.

e.g., 07 01 01* aqueous washing liquids and mother liquors

The red and blue colour coding of entries is provided in this document to support the instructions on the use of the EWC 2002 included below.

Under the Duty of Care, waste producers have a duty to classify and describe their waste correctly; this includes selecting the most appropriate six-digit code from the EWC 2002. Note : The written description must not simply reproduce the description from the EWC 2002 that accompanies each classification code.

Using the EWC 2002

The EWC 2002 details a series of steps for identifying wastes in the catalogue and determining whether a waste is covered by a hazardous waste entry. Set out below are the steps to be followed when using the catalogue.

Step 1 Identification by Waste Source

Identify the source process generating the waste in chapters 01 to 12 and 17 to 20 and select

the appropriate six-digit code. However it should be noted that:

- six-digit codes ending 99 (which represents wastes not otherwise specified under a particular two-digit and four-digit code) should not be used at this stage and are only to be used if no other code applies to a waste (Step 4 below)
- certain producers may need to look in more than one of these Chapters if their activity has a number of different processes.
- source related chapters may contain codes that apply to wastes generated by a manufacturing process (for example chapter 07). However, the manufactured products themselves may be found elsewhere in the EWC 2002 .
- Separately collected packaging waste, including mixtures of different packaging materials, should be classified under 15 01 and not 20 01.

Step 2 Identification by Waste Type

If no appropriate waste code can be found in Chapters 01 to 12 and 17 to 20, then chapters 13, 14, and 15 must be examined to identify the type of waste.

Step 3 Waste not otherwise specified in the list.

If a suitable waste code cannot be found in Chapters 13 to 15, a six-digit code from Chapter 16 should be used to identify the waste.

Step 4 Waste not otherwise specified in the chapter

Only if no suitable six-digit code can be found in Chapter 16 should the most appropriate six digit code ending 99 in Chapters 01 to 12 and 17 to 20 be used .

Step 5 Hazardous Waste Classification

There are three types on entry in the EWC 2002

- **Absolute** hazardous that are colour-coded **red** and marked with an **A** in this document
- **Mirror** hazardous that are colour-coded **blue** and marked with an **M** in this document
- Non-hazardous that are colour-coded black in this document

"Absolute entries " :

These entries are marked in the EWC 2002 with an asterisk (*), but without a specific or general reference to dangerous substances. They are automatically considered hazardous.

There is no requirement to assess the composition of these wastes to determine whether they are hazardous or not; the European Commission has determined that these wastes possess one or more hazardous properties H1 to H14. **Absolute entries** are colour-coded in **red** and marked with an **A** in this document ;

e.g. **13 07 01* fuel oil and diesel**

"Mirror entries " :

Some wastes have the potential to be either hazardous or not, depending on whether they contain "dangerous substances".

These wastes are covered by two or more linked entries in the EWC 2002, collectively called **mirror entries**, that typically comprise:

- a hazardous waste entry (or entries) marked with an asterisk (*), and
- an alternative non-hazardous waste entry (or entries) not marked with an asterisk.

Step 5 continued

Mirror entry wastes, highlighted in blue and marked with an M, are easily identified because they make a reference to dangerous substances. They can do this in one of two ways:

A General Reference to dangerous substances: e.g.

07 01 11* **sludges from on-site effluent treatment containing dangerous substances** and its non-hazardous counterpart

07 01 12 sludges from on-site effluent treatment other than those mentioned in 07 01 11

A Specific Reference to dangerous substances: e.g.,

16 01 11* **brake pads containing asbestos** and its non-hazardous counterpart

16 01 12 brake pads other than those mentioned in 16 01 11

In both cases the waste must be assessed to determine if it falls under the hazardous or non-hazardous **mirror entry**.

- For **mirror entries** with a general reference to dangerous substances, the classification is determined by looking for the presence of any dangerous substance in the waste.
- For **mirror entries** with specific references to dangerous substances, the classification is determined by looking for the presence of the specific substance that is identified in the waste description (in the example above this is asbestos).

The assessment procedure is explained in the Hazardous Waste Assessment Framework (Section 3 of this document).

Note: Some entries in the EWC 2002 make specific reference to dangerous substances where the linked entry is an absolute entry. These are not considered to be **mirror entries**.

Non-Hazardous Entries (neither **Absolute** hazardous or **Mirror** hazardous)

Where a waste is not listed in the EWC 2002 with an asterisk, and the entry does not form part of a **mirror entry**, it is non-hazardous and does not need to be assessed, e.g.,

03 01 01 waste bark and cork

Certain wastes are listed in the EWC 2002 without an asterisk, but form part of a mirror entry for example ;

08 01 12 waste paint and varnish other than those mentioned in 08 01 11.

These non-hazardous **mirror** codes should only be used where assessment of the waste has determined that the linked mirror hazardous code(s) is not applicable.

No.	Chapter Title (shading relates to hierarchy of use)
01	Wastes resulting from exploration, mining, quarrying, physical and chemical treatment of minerals
02	Wastes from agriculture, horticulture, aquaculture, forestry, hunting and fishing, food preparation and processing
03	Wastes from wood processing and the production of panels and furniture, pulp, paper and cardboard
04	Wastes from the leather, fur and textile industries
05	Wastes from petroleum refining, natural gas purification and pyrolytic treatment of coal
06	Wastes from inorganic chemical processes
07	Wastes from organic chemical processes
08	Wastes from the manufacture, formulation, supply and use (MFSU) of coatings (paints, varnishes and vitreous enamels), adhesives, sealants and printing inks
09	Wastes from the photographic industry
10	Wastes from thermal processes
11	Wastes from Chemical surface treatment and coating of metals and other materials; non-ferrous hydro-metallurgy
12	Wastes from shaping and physical and mechanical surface treatment of metals and plastics
13	Oil wastes and wastes of liquid fuels (except edible oils, and those in chapters 05, 12 and 19)
14	Waste organic solvents, refrigerants and propellants (except 07 and 08)
15	Waste packaging; absorbents, wiping cloths, filter materials and protective clothing not otherwise specified
16	Wastes not otherwise specified on the list
17	Construction and demolition wastes (including excavated soil from contaminated sites)
18	Wastes from human or animal health care and/or related research (except kitchen and restaurant wastes not arising from immediate health care)
19	Wastes from waste management facilities, off-site waste water treatment plants and the preparation of water intended for human consumption and water for industrial use
20	Municipal wastes (household waste and similar commercial, industrial and institutional wastes) including separately collected fractions.

- 1 For the purpose of this list of wastes, PCBs will be defined as in Directive 96/59/EC.
- 2 Hazardous components from electrical equipment may include accumulators and batteries mentioned in 16 06 and marked as hazardous; mercury switches, glass from cathode ray tubes and other activated glass, etc.
- 3 For the purpose of this entry, transition metals are: scandium, vanadium, manganese, cobalt, copper, yttrium, niobium, hafnium, tungsten, titanium, chromium, iron, nickel, zinc, zirconium, molybdenum and tantalum. These metals or their compounds are dangerous if they are classified as dangerous substances. The classification of dangerous substances shall determine which among those transition metals and which transition metal compounds are hazardous.
- 4 As far as the landfilling of waste is concerned, Member States may decide to postpone the entry into force of this entry until the establishment of appropriate measures for the treatment and disposal of waste from construction material containing asbestos. These measures are to be established according to the procedure referred to in Article 17 of Council Directive 1999/31/EC on the landfill of waste (OJ L 182,16.7.1999,p.1) and shall be adopted by 16 July 2002 at the latest.
- 5 Stabilisation processes change the dangerousness of the constituents in the waste and thus transform hazardous waste into non-hazardous waste. Solidification processes only change the physical state of the waste (e.g. liquid into solid) by using additives without changing the chemical properties of the waste.
- 6 A waste is considered as partly stabilised if, after the stabilisation process, dangerous constituents which have not been changed completely into non-dangerous constituents could be released into the environment in the short, middle or long term.
- 7 Hazardous components from electrical and electronic equipment may include accumulators and batteries mentioned in 16 06 and marked as hazardous; mercury switches, glass from cathode ray tubes and other activated glass, etc.
